

What if tracking student achievement was the easiest part of your day?

Your students' success is your first concern — it always has been.

You know that measuring performance and putting powerful information in teachers' hands for just-in-time intervention is critical to advancing achievement. To instruct effectively, you need to know what's working and what's not. It seems so simple, but the tools available to you may not have worked that well. Quite frankly, performance tracking tools have often been expensive and complex.

Complicated systems use teachers' valuable time and take them away from where they are most needed — at the front of the classroom guiding the instructional process. Costly programs are difficult to fund when every dollar matters. A do-it-yourself project can be expensive to implement and lack the full functionality that is needed down the road.

The INFORM® Learning System is an integrated solution that adds assessment and reporting tools to your existing data systems. You receive immediate feedback and access to appropriate resources, giving you precise ways to target instruction.

Because the INFORM® Learning System integrates data-driven tools and resources with a web-based academic data warehouse, you have access to a full suite of capabilities:

- **Assessment:** Student performance measurement is easily managed, using standards-aligned formative and summative assessments that can be scored immediately and delivered to teachers' desktops.
- **Reporting:** Analytics allow you to individualize instruction and group students by proficiency levels. Timely reports provide the opportunity for intervention and development of individual academic improvement plans throughout the year — not during high-stakes testing when it's too late to make changes.

- **Resources:** More than 1 million content standards with aligned resources give you the tools to determine effective lesson plans. An easily searchable online database enables you to locate instructional resources already vetted by educational experts.
- **Community:** You don't have to go it alone. Administrators, teachers and parents can communicate more effectively, keeping all stakeholders informed and on the same page. Educators have access to both local and global communities where they can discuss challenges, pose questions and share best practices.

The INFORM® Learning System does what effective technology should do. It smoothly integrates data with instructional tools and resources *and* connects all the people involved. If you can give everyone easy access to actionable data, imagine the impact you can have on student learning.

EDmin, Inc. is a longtime leader in providing learning and accountability solutions for K-20 education. The company has worked with schools and districts of all sizes for 20 years and now serves nearly 5 million users in all 50 states and the international market. For more information, visit www.edmin.com.
