

One Company. Thousands of Success Stories.

Education is about success. It's about helping students reach their potential. When it comes to reaching the potential of your IT infrastructure, you sometimes need help too. NetApp has the infrastructure solutions you need for storage and data management. That includes virtualization, unified storage, data deduplication, backup, recovery and more.

By consolidating your storage with NetApp, you'll significantly lower your costs for raw storage. You'll have far fewer spinning disks — so you'll spend less on power, cooling and space. You'll also be able to delay large capital expenditures for new computing facilities.

Numerous demands in the educational environment keep you constantly moving forward. You've added IT services. You've expanded, adding servers and infrastructure. Your IT department is doing more — but it's costing more too. It's taking more hardware, power and cooling than you'd prefer. Your data centers are struggling to keep up, with space and power limitations becoming increasingly problematic. And the nonstop explosion in data requires a more efficient storage environment.

NetApp's innovative storage and data management solutions help more than 5,000 organizations store, manage, protect and retain their data. The NetApp operating system emphasizes storage efficiency while unifying data storage and management. NetApp software maximizes hardware, while the unified architecture helps consolidate storage in your data center.

Enhance Virtualization

To get the most benefit from server virtualization, you have to focus on storage as well. One without the other doesn't make sense. Implementing both server virtualization and storage consolidation creates maximum productivity and efficiency — lowering costs and improving scalability.

Go Green

With NetApp's highly efficient storage systems, you'll reduce the carbon emissions and overall environmental impact from your data center.

Continue Saving

The efficiencies you gain today will carry over far into the future. With NetApp, consolidated storage, better efficiency and lower costs are here to stay.

NetApp™

NetApp is a Fortune 1000 company with more than 140 offices worldwide. With headquarters in Silicon Valley, the company is perfectly located for research and development, partner relationships and access to knowledge. It all puts NetApp in a great position to help you achieve your IT goals.

NetApp. Go further, faster.
