

Extending the Virtual Classroom

iLinc for Learning was the first virtual classroom tool developed by academics. Their intention was to create an online learning and professional development experience that would go far beyond the limits of traditional classroom teaching. They succeeded.

iLinc for Learning provides unparalleled engagement between teachers, students and administrators. It's an essential component of integrated LMS strategies for K-12 districts and universities alike. It also helps institutions reduce their technology footprints, and even allows them to extend their brands and outreach worldwide.

Extending Outreach and Brand

Unlike typical classroom technologies, iLinc is configurable beyond the classroom — providing administrators with a cost-effective tool to communicate worldwide for teacher recruitment, research collaboration, fundraising, brand awareness and alumni outreach. Administrators can also use iLinc to facilitate meetings and webinars.

Reducing Technology and Carbon Footprints

iLinc for Learning doesn't require more hardware, because it's a hosted software-as-a-service (SaaS) solution. And iLinc's patented Green Meter technology works continuously on the back end, tracking carbon emissions avoidance for every teaching session, by measuring distances between IP addresses and the instructor's location. The data is fully transparent and aligns with many institutions' green and sustainable policies.

Teaching and Learning

iLinc builds classrooms without boundaries. As an online learning platform within a strategic LMS framework, iLinc provides unmatched capabilities. Together, teachers and students can:

- ✓ Share documents
- ✓ Visit websites
- ✓ Create and save whiteboards
- ✓ Leverage breakout rooms for group activities
- ✓ Poll the class
- ✓ Record sessions/provide online access to students 24/7
- ✓ Launch sharable content object reference model (SCORM)-compliant tests
- ✓ Play prerecorded videos
- ✓ Use live webcam videos for all students
- ✓ Track attendance
- ✓ Create Q&A sessions on the fly

iLinc and Instructional Design

iLinc provides more than innovative technology. It also provides essential services and best-practice advice for instructional designers, helping them transform traditional, asynchronous lesson plans into synchronous learning experiences that draw students in. With iLinc, students are more fully engaged in the learning process, interacting with teachers — and with one another — in exciting new ways.

About iLinc

iLinc, a pioneer in the development of online learning tools, helps educational institutions redefine "the classroom," facilitates innovative teaching, and enables the extension of an institution's brand worldwide. An essential component of any Learning Management System, iLinc combines *politely obsessive service* with robust, patented, and configurable tools for teachers, students, and administrators.
